

CONSEPT V – STRENGTHENING THE VOCATIONAL TRAINING SYSTEM

Short Project Description

As part of the project, the curricula for five training courses - two in electronics and automation and three in transport - will be fundamentally revised and modernised. The new curricula will be based on the latest industry standards and requirements, with a special focus on sustainability aspects (automation, digitalisation and greening). The links between VET and the labour market will be strengthened to provide relevant work placements in addition to demand-driven curricula. The aim is to increase the employment rate of VET graduates in the selected sectors.

Project Goals

- VET institutions are able to cooperate effectively with the private sector, which provides relevant internships.
- VET institutions provide labour market-oriented training in the selected sectors. To this end, new occupational and qualification standards are developed and curricula are updated.
- Learning materials and examination instruments are developed and teachers are trained on the revised curricula.
- The workshops of the VET institutions will be better equipped.
